

## 3.5.87

### RESOLVED

---

- **Resolved** an issue where subsequent rotations of several pages from the document window would not work.
- **Resolved** an issue where users logged in via a domain would not be able to launch document approval from the menu.
- **Resolved** an issue where definition storage rules were being truncated to 255 characters. The full limit of 1024 characters is now available.
- **Resolved** a problem where inZone was crashing while trying to read a Code 25 barcode from a specific type of images.
- **Resolved** an issue where fresh installs were not able to view documents without opening the advanced security window first.

### CHANGED

---

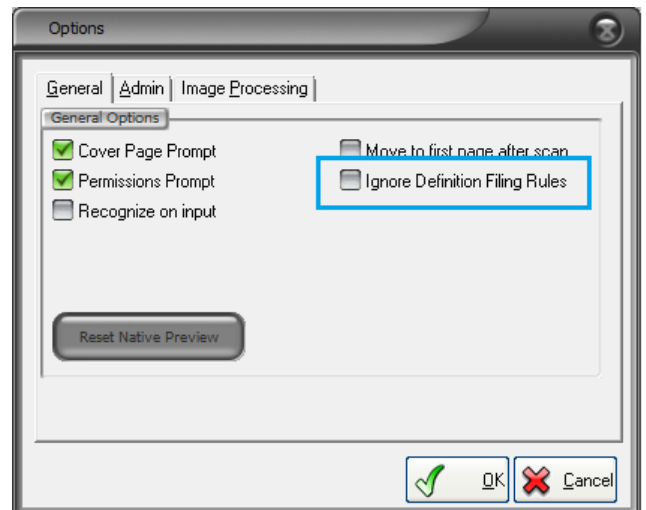

- **Changed** the cleanup time on the %temp% folder for inzone. Previously, InZone was creating temporary files in the windows user's temp folder and wasn't always being removed when they were done.
- **Changed** some windows to support different Windows Font sizes by scaling to the DPI rather than the Font size.
  - Login Form
  - Document Action (drag and drop > Post-login)
  - Document Approval (fixed the high-lighting issue of menu bar)
  - Insert Pages (within Document View)
  - Select Pages (within Document View)
  - Delete Pages (within Document View)
  - Notes Panel (within Document View)
  - Add Notes (from within Document View)
  - Versions Panel (within Document View)
  - Add Version (from within Document View)
  - Intact Licenses (frmLicenses.cs)

### NEW

---

- **New** - iPacks can now be exported with images greater than 2 GB of images
- **New** feature that will allow you to delete documents when opened from Key From Image.
-

- **New** feature to ignore definition filing rules on the document window. When this option is chosen (in Tools > Options) document attributes like Title and Summary are not read-only when a definition is selected.
- **New** option to convert a PDF to a native document that can be launched with adobe if a PDF cannot be printed due to memory constraints.

## 3.5.86

### **RESOLVED**

---

- **Resolved** a problem in Doc Approval where users were not able to approve documents.
- **Resolved** a bug where clicking on the document window's "Page" TextBox would cause the application to hang if an active custom field edit was in progress.

### **CHANGED**

---

- **Changed** behavior of the Save button in Doc Approval - now only saves documents that are checked in the grid.
- **Changed** recognizing an already searchable PDF will no longer use OCR to read the text.

### **UPGRADE**

---

- **Upgraded** the OCR engine used by Intact SMART. **REQUIRED FOR CLIENTS 3.5.86 AND UP**

## 3.5.85

### **NEW**

---

- **New** thumbnail view of the first page of an image document to the search results window.
- **New** hourglass in the document window when performing a "retrieve" while the query is executing.
- **New** Intact Reporting Utility into the Intact client.
- **New** functionality to Batch Review to continue adding pages to the current selection whenever the user presses the down key.
- **NEW** feature where a user is given the ability to convert a PDF to Native when the PDF is unable to be opened due to the size of the images in the file.

### **RESOLVED**

---

- **Resolved** a problem where rotating multiple pages of a PDF would not save correctly.
- **Resolved** a problem where temp files during scanning are being saved to the default location rather than the user's current location.
- **Resolved** a problem where adding pages to a document would sometimes seem to add them in an incorrect order.
- **Resolved** a problem where files were being removed after being added to a document using Add Image File.
- **Resolved** a problem where the Document Approval was not defaulting to the user's windows domain while approving documents.
- **Resolved** a problem when batch recognize runs out of memory, it no longer keeps trying to process documents.

## 3.5.84

### NEW

---

- **New** 'retrieve' capabilities within the document window to retrieve from other records of the same type stored within Intact.
- **New** rotating image pages in DocApproval now saves the rotations during save.

### RESOLVED

---

- **Resolved** a problem where a definition with only two letters or less (e.g. "PO") would not populate documents in Key From Image.
- **Resolved** a problem where the top custom field is changed when focus is left on a date field and pressing the 'Scan' button.
- **Resolved** an issue where an extra Power User license would remain consumed after using inZone (stand-alone or via the Intact Printer or DragDrop).
- **Resolved** an issue where dates were being displayed and used in definition naming.
- **Resolved** an issue with compression where file sizes when emailing were larger than expected.
- **Resolved** a problem with storage filing creating an extra root folder called "Intact Storage" if the definition storage rule started with "/Intact Storage".

### CHANGED

---

- **Changed** the outlook plug-in to copy over email data to custom fields on the document when using Attribute Now or Attribute Later. The plug-in will also update the document Name, Summary, and Author like previous versions.
- **Changed** the scaling mode on the Print Images window so customers can find the print button when they increase the windows font size on a low resolution monitor.
- **Changed** the Active Directory domain login so it is no longer tied to the license.
- **Changed** the behavior of the "Remove Definition" prompt that was added in 3.5.82 to only show if the selection contains at least one document with a definition.
- **Changed** the location of the advanced security in the administration menu.

## 3.5.82

### **NEW**

---

- **New** legacy mode to determine which page the user is returned to after inserting new pages to a document. The software currently changes the page to the first newly added page. When legacy mode is checked, the page is changed to the first page in the document.
- **New** 'Print current document' option to the Document Approval window.
- **New** installer now opens port 3826 during installation for communication with the License server.
- **New** installer now does not install certain workflow-specific dll's to the Action Service directory when installing the action service.
- **New** warning dialog when saving an office document that prompts changes in the preview will not be saved.

### **RESOLVED**

---

- **Resolved** a bug where virtual nodes did not display correctly in the 'Storage Selection' dialog.
- **Resolved** a bug where occasionally custom field data would copy onto other fields when the custom field grid lost focus.
- **Resolved** a bug where notes marked as private lose their privacy setting when copying the document through the organizer.
- **Resolved** a bug where opening the person maintenance window multiple times would cause a runtime exception.
- **Resolved** a bug in the document window where the recognize checkbox was not automatically checked when the current document type has recognize checked.
- **Resolved** spelling mistake on the Drag and Drop / Intact Printer action menu.
- **Resolved** a problem for customers upgrading to 3.5.81 who are still using MSDE/SQL2000 databases that could not open documents after the upgrade.
- **Resolved** a problem where "Attribute Now" in Drag Drop / Intact Printer always used admin as the owner.

- **Resolved** a bug where clicking in certain rows on the Type Maintenance window would cause an error message to show up.
- **Resolved** the font color on the login window for inZone, Audit Trail, et al.
- **Resolved** a problem where adding a sample file with impersonation turned on caused an error.
- **Resolved** a problem that was caused by moving an entire folder. The storage source now changes to manual for any documents affected by the folder move operation.
- **Resolved** an error where batch review would error when using Quick-save or Add-to-Doc when the document does not have a definition.
- **Resolved** a problem where inZone documents were always being saved to the default location rather than the location for the current user's role.

### **CHANGED**

---

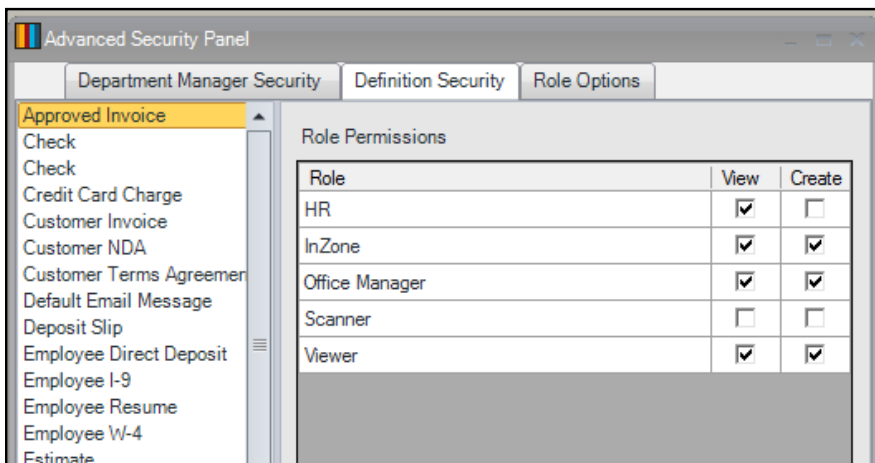

- **Changed** the message when deleting only folders from the Intact organizer. It no longer mentions deleting documents if no documents are in the selection (or in a subfolder of the selection).
- **Changed** the alignment of the 'Title' label on the document window so that it lines up with the other attribute labels.

### 3.5.81

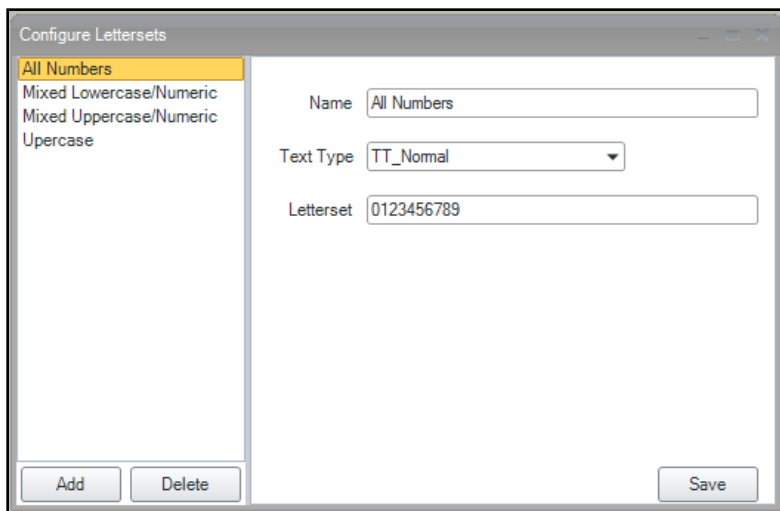

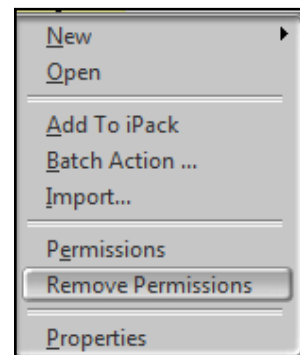

#### NEW

- **New** Advanced Security Panel to the administration menu. This allows managing definition level security as well as assigning department managers and folder-owners.

- Each definition can enable/disable roles from viewing or creating definitions.
- Without the view permission, users cannot open documents in the organizer or from search results.
- Without create permission, users cannot see the definition in places where creation is allowed

- **New** "Remove Permissions" menu option to the organizer available only to administrators and folder-owners. It removes all permissions from the selected folder and all sub-folders (except for the administrator and folder-owner).
- **New** mouse-wheel scrolling in Document Approval window.
- **New** window in the Portfolio Manager to manage the OCR Lettersets for use within inZone.

## **RESOLVED**

---

- **Resolved** a problem where Key From Image did not reassign the owner of the document when saving it. This causes documents that come in from sources that auto-assign admin as the user (such as hot folders) to remain owned by admin rather than the user who keyed them in.
- **Resolved** a bug where the recognize box was not being checked when selecting a definition when the document was being attributed by a document with separator pages.
- **Resolved** a problem in the document window where the title/summary information was being disabled after changing types, even though no definition was selected.
- **Resolved** a bug where document note changes were not being logged in the Audit Trail.
- **Resolved** a bug where page files would go missing after deleting other pages.
- **Resolved** a bug in thumbnail scrolling so that if you are viewing a thumbnail and delete the current page, the correct thumbnail is scrolled back into view instead of returning the list to the first thumbnail.

## **CHANGED**

---

- **Changed** Intact Authentication to show the full domain name (e.g. INFOD.COM instead of INFOD).
- **Changed** the Key From Image drop-down to only show definitions that have documents in the corresponding routing folder (and that the user has permissions to see).
